- Draw your design
- How did you test your design?
- What were the results?
- How did you change your design to improve it?
- Did you retest it? Did the results improve?
- Describe your final design and does it work?

Engineering Design Challenges will be judged based on creativity, design, function, and recordkeeping (journal or engineering notebook).

Juniors-grades 3-7; Seniors- grades 8-12.

The beam (arm) is able to swing (go up and down). The arm of the catapult must be adjustable from the center to an offset (one side of the beam is longer from center pivot point).

- Use at least five (5) different types of materials or parts (craft sticks, brads, dowels, etc.)

Design a wheel-driven vehicle, powered only by one rubber band (size #64 approx. ¼” wide by 3½” long by 1/32” thick.), which will transport a one-pound “load” (box of baking soda approx. size: 3½” x 4½” x 2”) at least 9 feet (on a smooth flat floor) while remaining within the boundaries of a 3 ft. wide parallel track (marked off with masking tape). Speed is not a criteria.

There are no restrictions on materials, size, weight or number of wheels. However, the only energy source permitted is the elastic energy of one rubber band. Commercially assembled vehicles are NOT permitted. However, commercially manufactured components may be used as parts of the vehicle. The vehicle must be self-starting (i.e., no pushing, external power starts, etc.). Propulsion of the vehicle must be through the wheels (i.e., no propellers, no launching mechanism). Transferring the energy of the rubber band to wheels via gears, fly wheels, etc., is encouraged. No remote-control devices are permitted.

A journal or engineering notebook should be included to describe the creation, purpose and function of the device. Explain how you built and tested your vehicle and if you made any modifications. Chart or graph collected data and explain how you measured improvements in your engineering notebook or journal.

The Future of Agriculture Research Challenge Displays

The future or agriculture research displays will illustrate current research and forward/futuristic thinking that is changing the field agriculture and agricultural based careers. 4-H members will research current trends, future thoughts and ideas for continuing to effectively feed the world. These projects should have a minimum of three scholarly references identifying where and when the information was published.

These projects may:
- Describe the challenging need for increased food production for a growing population
- Describe a new agricultural production technique or an emerging agricultural technology that will enhance or improve our agricultural and food production systems,
- Illustrate a new vision for the future of agriculture
- Describe new STEM-based careers in agriculture.

Research displays should use research-based information and resources to answer questions similar to the following, “What will the future of Agriculture look like?”, “How will agriculturalist feed an ever-growing population?” or “What are future careers in agriculture?”

All research displays should be mounted on a free-standing display board not to exceed 3’ x 3’ when the sides are extended for display. Commerically available “Science Fair Presentation boards” are encouraged”. First place exhibits in each class will be displayed. Second place and sub-sequential exhibits may be displayed based upon space available and judges’/committees’ discretion. Displays must be free standing and are limited to 36” x 36”(width x depth) when sides are extended. Commercially available “Science Fair Presentation Boards” are encouraged.

General Skills to be mastered in project/product in ADC, IDC and HTDC:

Structural Design: Construction technique, size, form, color and texture suited to the materials and product end use.

Elements of Design: The finished product illustrates the member is "learning or mastering" the basic elements of design - lines, shapes or forms, textures, colors, and space.

Principles of Design: The finished product illustrates an awareness and application of the principles of harmony, proportion, balance, rhythm and emphasis adding dimension, interest and/or appeal to the finished product.

Surface Design: Any lines, shapes, colors, textures, or materials applied to the product or item design that creates an emotional or personal quality, individuality and creative expression without disturbing initial/end purpose. Design is that "something which makes the item unique to the individual designer."

The purpose of this project area is for members to learn about and document personal, 4-H, or subject related history using appropriate conservation, preservation and/or restoration methods. Think of this project like our own “Antique Road Show” 4-H project area.

- Each exhibit will require research and reporting to authenticate the item being exhibited and to justify the method chosen to preserve/display the item.
- 4-H Curriculum has been developed to introduce and educate 4-H members and volunteers in the preservation and conservation of artifacts. The criteria/standards used to evaluate the will reflect the member’s mastery of conservation and/or preservation techniques and their ability to document memorabilia/history. This is accomplished with the use of the Authentication Card (4H-HLTH-413).
- The Authentication Card must be legible and securely attached to the front of ALL exhibits. Exhibits will be disqualified if they do not have a card.
- The county and state fair will do their best to insure items are respectfully handled, but they do not assume responsibility for any item damaged or lost while on exhibit. Please consider this when entering your “collectables.”

This means each item within the collection is enclosed in a frame, notebook, attached to a tray, or firmly attached to a rigid display board (foam core, matt board, corrugated plastic, etc.) in a manner where items cannot be separate from the collection.

COLLECTION – Minimum of five (5) items. Each collection will be limited to a display area no larger than 22” X 28” when lying down.

HISTORY

The Tulsa County Free Fair began in 1903 at the Western Association baseball park at Archer and Boston. With enactment of the Oklahoma Free Fair Act in 1915, a 15-acre tract of land north of Archer and Lewis was purchased to provide more suitable grounds. In 1923, thanks to a land donation from J.E. Crosbie, the fair was moved to a portion of the present Expo Square between 15th and 21st Streets. Passage of a major bond issue of $500,000 provided for the construction of the Pavilion in 1931. The fair board acquired land adjacent to the gift acreage in later years, and the "state fair" was born.
