

## Broadleaf Weed Control in Pasture

Early May is the ideal time to control broadleaf weeds in pasture and hay meadows. Weeds at this time are small and actively growing making an ideal situation for weed control. Herbicides of choice at this time for broadleaf weed control are 2,4-D Amine, Grazon P + D, or Weedmaster. To get the most out of your herbicide dollar, make sure your sprayer is calibrated and you read and follow all herbicide recommendations.

For more information on weed control, contact the Tulsa County OSU Extension Center at 918/746-3725.
